ABOUT Phone Number: +90 542 231 61 91 | GitHub: github.com/nailkocabay | Portfolio: nailkocabay.com

I am a fourth-year **Computer Engineering** student at Marmara University with interests in **Artificial Intelligence** and **Full-Stack Development**. I build end-to-end applications using modern frontend technologies and backend system design principles. I am seeking an opportunity to grow as a **Full-Stack / AI-oriented Software Engineer** and contribute to real-world projects.

EXPERIENCE

AI Engineering Intern

September 2025 – Present

Payantis Finansal Teknoloji A.Ş., İstanbul

- Built **AI-driven automation tools** to streamline engineering workflows and improve operational efficiency.
- Developed **ML models** for fraud detection, identifying anomalous patterns in large-scale financial datasets.
- Designed **data pipelines** for preprocessing, feature engineering, and model evaluation to enable scalable analysis.
- Contributed to a **multi-agent fraud detection system** using consensus-based decision mechanisms.
- Improved performance via **parallel processing** for high-volume data handling.
- Prototyped and deployed solutions using **AI tools** and **cloud environments**.

Engineering Intern

July 2025 – September 2025

JMW Jant Sanayi A.Ş., Umurlu/Aydın

- During my internship at JMW Jant Sanayi, I primarily worked on **network security**, **network configuration**, and **Windows Server** management. In addition to these responsibilities, I supported various **computer hardware** tasks, which broadened my understanding of IT infrastructure and enabled me to contribute to both software and hardware operations within the company.

Intern

August 2024 – September 2024

FLO Mağazacılık A.Ş., İstanbul

- Completed a Front-End focused internship at **FLO Mağazacılık A.Ş., İstanbul**, strengthening my **HTML** and **CSS** skills by recreating the company's homepage with **semantic HTML**, **responsive design principles**, and **modern UI practices**.

PROJECTS

Agent Network Project

- Designed a **multi-agent system** for **AI-driven fraud detection** and financial compliance, enabling coordinated decision-making across specialized agents.
- Built a scalable architecture where agents perform **domain-specific analysis** (behavioral patterns, anomalies), contributing to a **consensus-based decision** pipeline.
- Implemented **data pipelines** with feature engineering and ML models for accurate detection of suspicious financial activities.
- Developed **inter-agent communication** and **scoring mechanisms** (consensus, weighted evaluation) to improve reliability and reduce false positives.
- Optimized performance using **parallel processing** for efficient large-scale data analysis.

HTTP Web Server Project

- Built a **custom HTTP web server** from scratch using **socket programming**, implementing request-response handling, **static file serving**, and a **JSON API endpoint**.
- Containerized the application with **Docker** and designed it following **backend architecture principles**.

Portfolio Website

- Developed a modern, responsive portfolio website using **Next.js**, **React**, and **TypeScript**, built reusable UI components with **Tailwind CSS** and **Radix UI**, implemented form validation and data visualizations, and deployed via **GitHub** and **Cloudflare Pages** with performance optimization.

TECHNICAL SKILLS

Programming and Markup Languages: Python, Java, C#, React, C, SQL, JavaScript, HTML, CSS

Dev Tools: AntiGravity, Cursor, Claude, MSSQL, Git, GitHub, Microsoft Azure, Google Cloud Platform

EDUCATION

Marmara University

Computer Engineering, 83.8 / 100

Istanbul, Türkiye

2022 – Present

LANGUAGE

Turkish: Native

English: B2
